

Baroosh introduction

Arya Steel Alvand Company was established in 2009 to manufacture aerated autoclaved concrete (AAC) blocks and panels. In 2013, the company launched an autoclaved light concrete production line in cooperation with Dongyue, a licenses of AAC concept GmbH from Germany. The products of this factory include aerated autoclaved blocks and panels, as well as special concrete glue, which are known as "Baroosh". The factory has an annual production capacity of 300,000 cubic meters of AAC block and panel and 100 tons of concrete thin-bed mortar (glue). This company is the first manufacturer of AAC panels in Iran with dimensions of 600 cm long by 60 cm height in different thicknesses.

AAC ADVANTAGES

Improved thermal efficiency
fire resistance

minimizes the generation of solid waste during use
Light weight saves cost & energy in transportation,
labor expenses

Larger size blocks leads to faster masonry work

Reduces the cost of the project

Environmentally friendly

Fire resistant

Great ventilation

Lightweight

Accuracy

Long lasting

Quick assembly

Soundproof

Fast Construction

Energy Saving

Lightweight

Fire Resistant

Easy Installed

Versatile

Durable

Accurate

AAC ADVANTAGES

Recyclable

Natural Insulation

Super Smooth

Breathable
